

Rashed Al-Qatarneh

Software Development Engineer · Payments & Distributed Systems · Amazon

Amman, Jordan · rashedhaitham188@gmail.com · +962 770 349 973 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Software Development Engineer who grew from building microservices banking platforms and secure financial APIs to owning production payment processor integrations at Amazon scale across Africa, the Middle East & Turkey, serving millions of customers. Specializes in distributed systems, payment infrastructure, and backend security in regulated environments. AWS Certified Cloud Practitioner and AI Practitioner.

EXPERIENCE

Software Development Engineer · Amazon

Jun 2025 – Present

- Owned the full payment lifecycle as the **single technical owner** of all payment integrations across AMET marketplaces (Africa, Middle East & Turkey), serving **millions of customers** across the full stack.
- Resolved a long-standing stuck workflow reliability issue affecting **10,000+ customers** in a highly complex processor integration by identifying non-obvious external inconsistencies and addressing multiple underlying system gaps, measurably reducing pipeline blockage.
- Designed a real-time payment availability monitoring system tracking processor health per operation type, detecting partner outages automatically and alerting before customer-facing degradation. Achieved **60% faster incident detection** and **50% reduction in alert noise**, directly reducing on-call load and MTTR.
- Conceived and built **Payment AI Integration Authority (PAIA)**, an end-to-end platform automating processor onboarding across requirements, TPS, infrastructure provisioning, and code generation. Originated as a **hackathon-winning idea**, approved org-wide as a reference architecture, reducing onboarding from **~1 integration/year to 6+/year** per team and cutting **75%+ engineering effort** with timelines collapsing from months to under a week.
- Migrated remittance and chargeback file processing to a standardized SFTP-based platform, deploying AWS CDK infrastructure (TypeScript) across **21 configuration files** hardened with SecureCDK blueprints, establishing secure partner connectivity via SSH key authentication and IP allowlisting, and uncovering a cross-environment alarm isolation defect generating silent false alerts across **6 existing banking partners**.
- Built a full-stack serverless performance dashboard with a React frontend, API Gateway, Lambda backend, and JWT authentication that **auto-generates monthly and quarterly leadership reports**, eliminating hours of manual data collection per reporting cycle.

Java Developer · Bank Al-Bilad (via Inspire for Solutions Development)

Jan 2025 – Jun 2025

- Built a Customer Request Service enabling clients to submit and track requests with an admin management layer, implementing **JWT authentication**, **LDAP login**, and route access control by Channel ID and Client Version to meet strict banking security requirements.
- Designed RESTful APIs with **RBAC**, applying SOLID principles and design patterns (Factory, Singleton, Strategy) to deliver a maintainable, production-grade service in a regulated financial environment.

Java Developer · Inspire for Solutions Development

Sep 2024 – Jun 2025

- Designed and built a scalable **microservices banking application** using Spring Boot, Kafka for async inter-service messaging, GraphQL for flexible data fetching, and the Saga pattern for distributed transaction reliability, deployed via Docker.
- Set up full observability using Prometheus for real-time metrics and Zipkin for distributed tracing, and enforced fine-grained authentication via Keycloak with RBAC across all services.

SKILLS

Languages	Java
Frameworks	Spring Boot, Spring Security, Spring Cloud, GraphQL
AWS & Cloud	Lambda, API Gateway, DynamoDB, CDK, S3, SQS, Step Functions, EventBridge, AppConfig, Transfer Family, SNS, Cross-account IAM, Docker

Messaging	Kafka, SFTP, Event Streams
Security & Auth	JWT, LDAP, Keycloak, RBAC, OAuth2, SSH, SecureCDK, GuardDuty
Observability	Prometheus, Zipkin, CloudWatch
Databases	MySQL, PostgreSQL, DynamoDB, NoSQL
AI & Tooling	MCP (Model Context Protocol), Prompt Engineering
Practices	REST APIs, Microservices, SOLID, Design Patterns, CI/CD, Agile/Scrum

EDUCATION

B.Sc. in Computer Science · University of Jordan 2020 – 2024
Manara Problem Solving Program · 250+ LeetCode problems solved

CERTIFICATIONS

AWS Certified Cloud Practitioner · **AWS Certified AI Practitioner**

LANGUAGES

Arabic (native) · English (professional) · Russian (intermediate)
